A CHECK LIST OF ALASKAN FUNGI

Supplement 219

February 15, 1953

The Plant Disease Reporter is issued as a service to plant pathologists throughout the United States. It contains reports, summaries, observations, and comments submitted voluntarily by qualified observers. These reports often are in the form of suggestions, queries, and opinions, frequently purely tentative, offered for consideration or discussion rather than as matters of established fact. In accepting and publishing this material the Division of Mycology and Disease Survey serves merely as an informational clearing house. It does not assume responsibility for the subject matter.

A CHECK LIST OF ALASKAN FUNGI

Edith K. Cash

7b
Plant Disease Reporter,
Supplement, 219)

February 15, 1953

With the exception of a few fairly extensive lists, particularly those published by J. P. Anderson (1915-1952), and the paper by Saccardo, Peck, and Trelease on the fungi collected on the Harriman Expedition, records of fungi collected in Alaska are widely scattered through the literature. In view of the increasing interest in the flora of the Territory, and especially of the fungi causing plant diseases which are important from an economic standpoint, it has seemed advisable to compile the available references to the fungi reported from Alaska in a single list, including also records from herbarium specimens.

Host plants and localities are cited where known. Where the reference is to "Alaska", with no more definite place of collection, no locality is given in this list. The numbers following these data in each instance refer to corresponding numbers of the Literature Cited, indicating where the published record was found. Where data were obtained from unpublished records, the name of the collector is cited instead of a number to a literature citation. Such records were taken from herbarium specimens, for the most part in the Mycological Collections of the Bureau of Plant Industry and the National Herbarium Fungus Collections, both at the Plant Industry Station, Beltsville, and identified by past and present members of the Division of Mycology. Most of the rusts have been determined by George B. Cummins.

The arrangement follows that of Martin's Outline of the Fungi, 1950. It has obviously been impossible to verify determinations, particularly where names were taken from the literature, but some evident errors have been corrected and an attempt has been made to revise the nomenclature to conform with modern usage. Pre-starting-point authorities have been omitted from the names of fungi.

The writer is indebted to S. F. Blake for a revision of the host names, to G. B. Cummins for checking the section on rusts and for supplying additional records from the Arthur Herbarium, and to various collectors who have cooperated with this project by supplying material for study, particularly D. V. Baxter, D. M. Coe, C. L. Lefebvre, and G. A. Llano.
